X-ray Crystallographic Data for 18

The X-ray diffraction data for compound **18** was measured on Bruker D8 Venture PHOTON 100 CMOS system equipped with a Cu K α INCOATEC ImuS micro-focus source ($\lambda = 1.54178 \text{ \AA}$). Indexing was performed using APEX3 [1] (Difference Vectors method). Data integration and reduction were performed using SaintPlus 6.01 [2]. Absorption correction was performed by multi-scan method implemented in SADABS [3]. Space groups were determined using XPREP implemented in APEX3 [1]. Structures were solved using SHELXT and refined using SHELXL-2016 [4-6] (full-matrix least-squares on F²) through OLEX2 interface program [7]. All non-hydrogen atoms were refined anisotropically. Hydrogen atoms of -CH, -CH₂, -CH₃ groups were placed in geometrically calculated positions and were included in the refinement process using riding model with isotropic thermal parameters: Uiso(H) = 1.2(1.5)Ueq(-CH, -CH₂, (-CH₃)). Hydrogen atom of NH group was found in difference Fourier map and was freely refined. Crystal data and refinement conditions are shown in Table 1. The CIF file was deposited in the Cambridge Crystallographic Data Centre (CCDC 1892734).

Identification code	CFC_III_30_28_0m
Empirical formula	C ₄₀ H ₄₀ N ₄ O ₆
Formula weight	672.76
Temperature/K	99.97
Crystal system	monoclinic
Space group	C2
