Supplementary Material

A modular approach for the installation of functionalized phosphonates to heterocycles

Zachary Shultz,[a] Chuan Shan,[c] Lukasz Wojtas,[c] and Justin M. Lopchuk*[a,b,c]

[a] Drug Discovery Department, H. Lee Moffitt Cancer Center and Research Institute, 12902 Magnolia Drive, Tampa, Florida 33612, USA
[b] Department of Oncologic Sciences, College of Medicine, University of South Florida, Tampa, Florida 33612, USA
[c] Department of Chemistry, University of South Florida, Tampa, Florida 33620, USA
Email: justin.lopchuk@moffitt.org

Table of Contents

1. Copies of ^{1}H, ^{13}C, ^{19}F and ^{31}P NMR spectra S2
1.1. Phosphonate nucleophiles and heterocyclic electrophiles (**58**, **61**, **62**, **65**, **68**, **70**) S2
1.2. Phosphonate nucleophile scope (**26**-**35**).....S15
1.3. Phosphonate electrophile scope (**26**-**46**) S46
1.4. Sodium ((1*E*,4*E*)-1-cyano-5-(diethoxyphosphoryl)-6-ethoxy-6-oxohexa-1,4-dien-3-ylidene)azinate (**50**) S83
2. Single crystal X-ray crystallography data S86
2.1 Crystallographic data for compound **30** S86
2.2. Crystallographic data for compound **50** S89

Phosphonate nucleophiles and heterocyclic electrophiles:

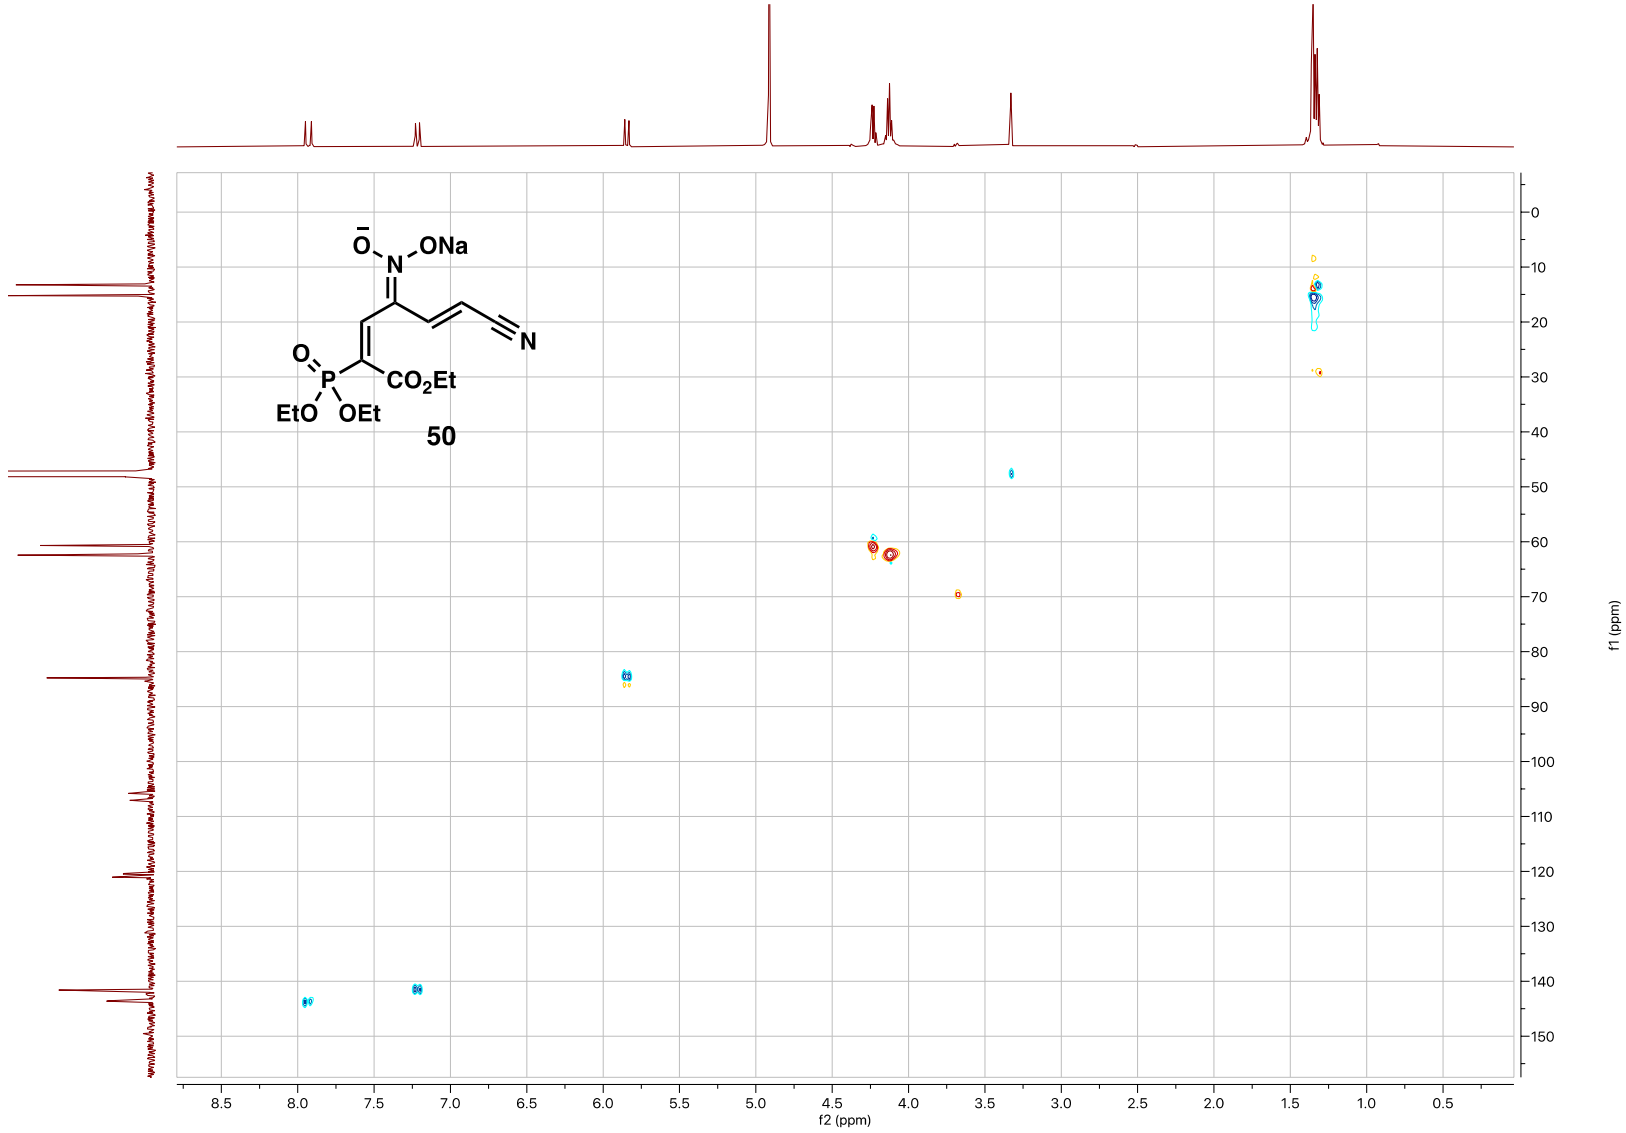
HSQC of 50:



Single-Crystal X-Ray Crystallography of Compound 30

X-ray diffraction data were measured on Bruker D8 Venture PHOTON II CPAD diffractometer equipped with a Cu K_α INCOATEC ImuS micro-focus source (λ = 1.54178 Å). Indexing was performed using *APEX3* [1] (Difference Vectors method). Data integration and reduction were performed using SaintPlus [2]. Absorption correction was performed by multi-scan method implemented in SADABS [3]. Space groups were determined using XPREP

implemented in APEX3 [1]. Structure was solved using SHELXT [4] and refined using SHELXL-2018 [5] (full-matrix least-squares on F^2) through OLEX2 interface program [6]. Disordered -OEt group was refined with restraints / constraint. Crystal data and refinement conditions are shown in Table 1.

Single-Crystal X-Ray Crystallography for Compound 50

X-ray diffraction data were measured on Bruker D8 Venture PHOTON II CPAD diffractometer equipped with a Cu Kα INCOATEC ImuS micro-focus source (λ = 1.54178 Å). Indexing was performed using APEX3 [1] (Difference Vectors method). Data integration and reduction were performed using SaintPlus [2]. Absorption correction was performed by multi-scan method implemented in TWINABS [3]. Space group was determined using XPREP implemented in APEX3 [1]. Structure weas solved using SHELXT [4] and refined using SHELXL-2018/3 [5] (full-matrix least-squares on F2) through OLEX2 interface program [6]. Ellipsoid plot was drawn with Platon [7]. Crystal was a twin. Data were integrated with Bruker-Saint using two orientation matrices determined in APEX3/RLATT based on two manually selected reciprocal lattices. Twin law from Saint: -1.00005 0.00008 0.02110 / -0.00011 -1.00040 0.08615 / 0.00404 -0.01146 1.00045. Reflections were scaled and merged with TWINABS. Detwinned data were used for refinement. Data and refinement conditions are shown in Table 1.
